Nonfarm Benchmark Revised Employment Numbers

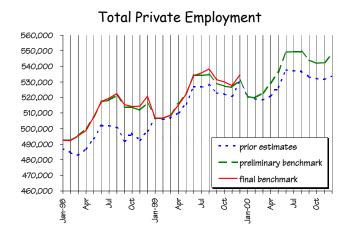

The Current Employment Statistics (CES) program surveys employers and then estimates nonfarm employment. These estimates are benchmarked with employment numbers from the Tax and Wage Quarterly. This, the final 1999 and preliminary 2000 benchmarks for nonfarm employment, incorporates wage and employment data from New Hampshire employers whose workers are covered by Unemployment Compensation.

Final 1999

The preliminary 1999 CES benchmark, prepared in early 2000, updated and revised estimates made monthly during 1999. This preliminary benchmark was based on the latest available data. When all 1999 covered employment data was available and validated, the 1999 benchmark was finalized.

The 1999 final benchmark set average annual employment at 605,800, an increase of 16,800 jobs from the final 1998 number. This was 1,200 more jobs than had been recorded in the preliminary 1999 benchmark.

The variance between the preliminary 1999 and final 1999 benchmarks was insignificant during the first half of the year. From July through December, revisions pushed preliminary benchmarks upward, with differences ranging from 1,100 jobs in July to 4,400 jobs in December.

Within the divisions, nearly all the difference was in the Services division. It had a 1,000 job jump. Most of it was in the rapidly expanding Business services. No other division including Government changed by more than 200.

Preliminary 2000

Once 1999 estimates were finalized, preliminary benchmarking of 2000 employment levels began. This process estimated 8,500 more jobs in 2000 than previously believed. The result showed employment up 15,000 jobs over 1998. Every month in 2000 varied upward from the prebenchmarked estimates. In the first two months the variance was miniscule - 800 and 500 jobs respectively. In March the variance went to 4,700 and then jumped to 8,300 in April. It remained above the April level for the rest of the year. The largest variance was 13,300 in December. Please note that the largest variance was only 2.1 percent above the revised estimate and the annual average was adjusted upward only 1.4 percent.

The largest divisional over-the-year employment gain between the 2000 preliminary and 1999 final benchmarks was in Services – up 9,000 jobs. Retail trade was a distant second - up 3,200 jobs. The only loss (-900) was in Manufacturing. Wholesale trade had the largest percentage increase - up 3.8 percent.

Benchmarked sectors Construction

The 1999 final benchmark revised Construction employment down by 100 to 24,300. This set the increase over the 1998 final benchmark at 1,300. Employment peaked in July, as is typical, with 26,100 jobs.

The preliminary Construction in 2000 estimated a gain of 700 jobs, 1,100 below the average of the revised monthly estimates during 2000. Monthly

2000 employment ranged from a low of 21,900 jobs in February to 26,800 in July. Every monthly estimate was revised downward, ranging from a 1,700 drop in February to 700 in June.

Manufacturing

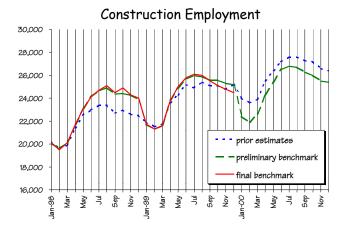

The final benchmark for 1999 estimated Manufacturing employment at 106,700, above the preliminary benchmark by 100 jobs. There was a 1,900 job loss in the division from 1998. The final benchmark for 1999 was either right on or within 100 of the preliminary number nine of the twelve months. In July Manufacturing employment typically drops by around 3,000 jobs as factories shut down. The August rebound did not happen in 1998 and that led to decreased employment for the entire fiscal year. In July 1999 there was a 2,300 over-the-month drop and again August employment failed to totally rebound.

The benchmark left durable goods manufacturing unchanged with a decrease of 100 jobs from 1998. In durable goods, Miscellaneous manufacturing and Transportation equipment manufacturing are nonpublished. Among the published industries there was a 1,500 job loss. Industrial machinery and equipment and Instruments and related products led the losses with 1,700 fewer jobs between them. Nondurable goods manufacturers offered 1,800 fewer jobs in 1999 than in 1998. The preliminary 1999 benchmark had estimated a 1,900 job loss. The largest job loss in a published industry was 600 in Rubber and miscellaneous plastics products. Textile mill products and Apparel and other textile products are not published.

The 2000 preliminary benchmark revised prior estimates upward an insignificant 200 jobs to 105,800, a loss of 900 jobs from 1999. Stone, clay, and glass products showed surprising strength, adding more jobs from the 1999 final benchmark than any other major group except the much larger Electronic and other electric equipment industry. The 2000 preliminary benchmark of nondurable goods showed a loss of 500 jobs with no major variances in any of the major groups.

Transportation, Communication, and Public Utilities

After languishing under 20,000 for most of the 1990s, employment in Transportation, communi-

cation and public utilities jumped 1,100 in 1998 and another 1,000 in 1999 to close the decade at 21,500. The 1999 job increase was attributable to the Transportation major groups, which increased by 1,100 jobs. The 1999 final benchmark of division employment was 200 more than the preliminary benchmark.

Preliminary 2000 estimated employment at 21,800, an increase of 300 over 1999. Again, the Transportation major groups led the way with a 300 job increase in 2000.

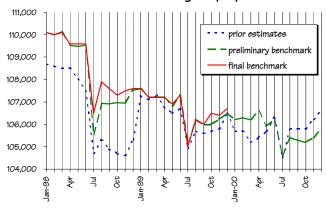

Wholesale Trade

Final benchmarking of 1999 employment data showed 31,700 jobs in Wholesale trade. This was 1,400 more than in 1998, but 200 below the preliminary 1999 estimate.

The 2000 preliminary benchmark exceeded original estimates by 700 jobs. The result was an increase in jobs in Wholesale trade of 1,200 jobs to 32,900. This division is half again the size it was in 1992.

Retail Trade

The final benchmark for 1999 in Retail trade was incredibly only 200 different from the preliminary. At 128,400, the division added 6,100 jobs, the most of any division in 1999. All the major groups saw growth, led by General merchandise stores and followed closely by Food stores and Eating and drinking places.

The preliminary benchmark for 2000 showed the division growing at a slightly slower pace. It added another 3,200 jobs in 2000. The revised monthly data had estimated only 1,300 more jobs. The 2000 total for the division was 131,600. This marked the sixth consecutive year of record employment in Retail trade. General merchandise stores again led the way with 1,000 more jobs.

Finance, Insurance, and Real Estate The final benchmark for 1999 showed employment jumping 1,200 jobs over 1998. There was no change in the estimate from the preliminary

change in the estimate from the preliminary benchmark. Employment stood at 32,600. About 300 of the new jobs were in Insurance.

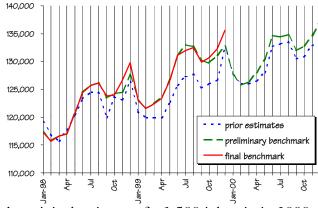

The 2000 preliminary benchmark estimated a mere 100 additional jobs for that year. This brought employment to 32,700, 200 below original estimates.

Services

Services added 5,900 jobs in 1999, just shy of the gain in Retail trade. The final benchmark pushed employment upward 1,000 from the preliminary numbers. The gain brought employment in this division to 178,700. Health services had a 1,500 job gain, but hospitals, the largest Health industry group, grew by only 200 jobs.

The 2000 preliminary benchmark estimated another 9,000 jobs. This was considerably above

Retail Trade Employment

the original estimate of a 1,500 job gain in 2000. Business services, with the addition of 3,600 jobs, dominated the increase.

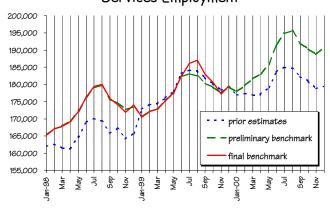

Government

The final benchmark revised the preliminary 1999 numbers in Government employment upward 100 to 81,500, an over-the-year gain of 1,700. Almost all the employment gain was in Local government, where employment increased 1,600 to 52,400.

Growth in Government employment increased another 1,500 in 2000. Again, Local government was responsible for most of the growth, 1,000 added jobs in 2000.

Martin Capodice

Services Employment

About CES

In order to gauge the state's economy in a timely manner, CES estimates employment each month from a sample of New Hampshire employers. Because it is based on a sample, the data is necessarily incomplete. At the end of each calendar year, CES employment estimates are revised, or benchmarked. The benchmark integrates the latest "covered" employment numbers from payroll reports submitted quarterly to New Hampshire Employment Security by New Hampshire employers subject to unemployment compensation law. The benchmark process allows an opportunity to adjust sample-based estimates to actual counts of jobs with New Hampshire employers. The resulting product offers a more accurate picture of the New Hampshire economy than could be achieved with sample-based estimates alone.

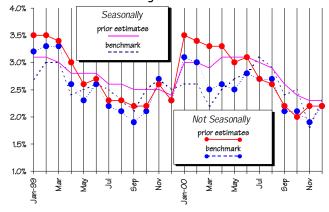

If you have any questions concerning this report, please contact Bernhard McKay, Labor Market Analyst, at 603-228-4127.

Benchmarked Local Area Unemployment Statistics

New Hampshire's average unemployment rate for 2000 was benchmarked at 2.8 percent, the seventh lowest rate in the United States. This was up from the 1999 rate of 2.7 percent, which ranked second lowest in the nation. For the year, employment averaged 666,320 and unemployment was 19,190. The total labor force was 685,510. Compared to 1999, employment was up 16,350; unemployment was up 1,060; and total labor force was up 17,410.

The benchmarked not seasonally adjusted 2000 LAUS revised employment downward by about ten percent in the first quarter and upward in the last three quarters. February employment had the largest reduction of the year (7,620). Unemploy-

New Hampshire Unemployment Rate - 2000 Benchmarked Figures and Prior Estimates

ment was revised upward in all but three months, July, August, and October. The labor force was smaller than originally stated in January and February by 3,850 and 4,700 respectively. The labor force was revised upward each month for the balance of the year, ranging from a low of 700 in March to highs of 9,400 in December and 7,440 in November. The unemployment rate was revised upward in all but August and October with no change in July and December. March experienced the largest increase, 0.8 percentage points.

Seasonally adjusted LAUS benchmarking resulted in a smaller labor force than previously reported in January and February with revisions of 3,890 and 4,460 respectively. The other ten months were revised upward, ranging from a low of 760 in July to a high of 9,310 in December. For employment, the first four months were revised downward. The smallest reduction was in April, 1,590. More substantial reductions were made in February, January and March, 7,430, 6,750 and 4,090 respectively. The last eight months were all revised upward, the largest changes coming in December (9,310) and November (8,500). The unemployment rate was revised upward by 0.7 percentage points in March, 0.6 percentage points in April, 0.5 percentage points in November, 0.4 percentage points in January, February and May and 0.3 percentage points in June.

About LAUS

The Local Area Unemployment Statistics (LAUS) program produces monthly estimates of the number of employed residents and the number of unemployed residents in the state's labor force. The sum of these is the civilian labor force. The unemployment rate is calculated by dividing the number unemployed by the total labor force.

Two regression models specific to New Hampshire are used. They extract data from three major sources: the Current Population Survey (CPS), the Current Employment Statistics program (CES), and Unemployment Insurance (UI) data.

- CPS The primary input is data from the monthly survey of New Hampshire households conducted by the U.S. Census Bureau. The LAUS process measures all the unemployed, even those who do not collect unemployment compensation benefits.
- CES These estimates gauge total employment levels of nonagricultural jobs in New Hampshire.
- UI Additional inputs come from the number of continued claimants of Unemployment Insurance who had no earnings in a specific week.

New Hampshire LAUS benchmarking for 2000 is complete, but will not be official until the data, along with that of the other states, is reviewed by the Bureau of Labor Statistics in Washington, D.C. This review process ensures comparability of estimates between states.
